Entity-Relationship Diagram

Catherine D · Bhavesh V

Chen notation · Rectangles are entities (double = weak) · Ovals are attributes · Diamonds are relationships (double = identifying) · Underlined attributes are primary keys, dashed underline = partial key

Cardinalities follow the foreign keys in the relational schema; foreign keys are shown by relationships, not as attributes. clinical_embedding.source_id is a polymorphic reference and audit_log.row_pk is recorded metadata, so neither is a relationship.
